OpenLearn | Free learning from The Open University

The Open University

# Statement of participation

# Karam Kottish

has completed the free course including any mandatory tests for:

## Introduction to computational thinking

This 12-hour free course taught algorithms and abstraction and described some applications of computational thinking.

**Issue date:** 14 January 2025

**www.open.edu/openlearn**

This statement does not imply the award of credit points nor the conferment of a University Qualification.
This statement confirms that this free course and all mandatory tests were passed by the learner.

Please go to the course on OpenLearn for full details:

# Introduction to computational thinking

https://www.open.edu/openlearn/science-maths-technology/introduction-computational-thinking/content-section-0

## Course summary

You will learn about algorithms and abstraction in this free course, Introduction to computational thinking, and encounter some applications of computational thinking in various disciplines, ranging from biology and physics to economics and sport science.

## Learning outcomes

By completing this course, the learner should be able to:

- describe the skills that are involved in computational thinking
- define and use the concepts of abstraction as modelling and abstraction as encapsulation
- understand the distinctive nature of computational thinking, when compared with engineering and mathematical thinking
- be aware of a range of applications of computational thinking in different disciplines.

## Completed study

The learner has completed the following:

**Section 1**

Computational thinking and automation

**Section 2**

Computational thinking and abstraction

**Section 3**

Computational thinking everywhere
